

Brute force Approach: → Generate all substring and check for the longest substring without repeating chars. [Time: $O(n^3)$]

Time: $O(n^3)$

Optimal Solution:

$s = "abatman"$	<table border="1"><tr><td>0</td><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td></tr><tr><td>a</td><td>b</td><td>t</td><td>m</td><td>n</td><td></td><td></td></tr></table>	0	1	2	3	4	5	6	a	b	t	m	n		
0	1	2	3	4	5	6									
a	b	t	m	n											
$ans=1$	$s = "a\textcolor{red}{bat}man"$														
$ans=2$	$s = "ab\textcolor{red}{at}man"$														
$ans=3$	$s = "abat\textcolor{red}{m}an"$														
$ans=4$	$s = "abatm\textcolor{red}{a}n"$														
<u>$ans=4$</u>	$s = "abatm\textcolor{red}{a}n"$														

ℓ will be updated to the previous 'a'. i.e. $0+1=1$

remove 'b,a' from

$\ell > n$

```
</> Code

C++ ∨ • Auto

1 class Solution {
